

Questionnaire for the Homoeopathic Treatment of Your Child (KFB_e)

This questionnaire for children as well as the initial consultation will form the basis for the treatment of your youngsters according to the rules of Classical Homoeopathy.

The questionnaire alone is not enough to choose your homoeopathic remedy successfully. The personal interview is always the most important part. The questionnaire only serves as additional information and offers essentially three advantages:

- Your preparation for your initial interview including your chance to talk to your blood relatives about your family history of illnesses.
- Preparation for the therapist to think outside the box or to analyse any important coherences. He furthermore will probably be able to recognize any features which may seem unimportant to you or you have gotten used to for a long time.
- As an impulse for your subconscious mind to remember forgotten conditions.

Excerpt from the Homoeopathic Questionnaire for Children

...
